

✓ Summary of your progress so far:

- **Step 1:** React + Vite + Tailwind + PWA ✓
- **Step 2:** Azure Functions (Python) backend ✓
- **Step 3:** SQL Express database + seed data ✓
- Frontend ↔ Backend communication tested ✓

You now have a solid, free-friendly foundation of the **KidToKid** platform running end-to-end on your local machine.

---

### Next steps (Step 4)

Now we can start expanding:

1. **Add Basket & Confirm Purchase endpoints** in the backend.
2. **Create Basket + Checkout pages** in the React app.
3. (Then later) Add the **Deliverer app** and delivery workflow.

Would you like to move on to **Step 4: Basket + Order confirm flow?**
